TECHNICAL SKILLS

Languages & Frameworks
PHP, Laravel, CodeIgniter, Go, JavaScript/TypeScript, Next.js, NestJS, Vue.js, React, Svelte, Spring Boot, C, C++

Infrastructure & DevOps
Linux Server Administration, Docker, MicroK8s (Kubernetes), CI/CD Pipelines, LEMP Stack

Databases
PostgreSQL, MySQL — multi-tenant schema design, query optimization

Practices
RESTful & API Architecture, Code Review, Technical Mentorship, Agile Collaboration

EDUCATION

BEng (Hons) Software Engineering
London Metropolitan University (UK), delivered via ESOFT
2025 – 2026

First Class Honours · Top Performer

Higher National Diploma, Information Technology
Sri Lankan Institute of Information Technology (SLIIT)
2020 – 2023

G.C.E. Advanced Level – Physical Science
Dharmaraja College, Kandy
2020

LANGUAGES

English — Fluent

Sinhala — Native

BEYOND THE CODE

3D & Visual Artist (Blender) — self-taught; 26 published models and 7.8K+ views on CGTrader · 2016–present

Independent Systems Developer — freelance builds, self-directed learning · 2022–present

Nimsara Gamage

SOFTWARE ENGINEER · FULL-STACK & DEVOPS

PROFILE

Full-stack Software Engineer with 4+ years shipping scalable web platforms in PHP, Laravel, and Go, now extending into Next.js and NestJS for modern, type-safe full-stack builds. Recently graduated with a BEng (Hons) in Software Engineering, First Class Honours, finishing as top performer in the programme. Equally at home writing backend architecture and running the infrastructure it lives on — Linux administration, Docker, MicroK8s, and CI/CD — with a track record of turning slow, fragile systems into fast, reliable ones. Leads by mentoring, not just building: known for hands-on code review and steering cross-functional architecture calls.

EXPERIENCE

Software Engineer – Full Stack
Jan 2025 – Present
Elevex Technologies (Pvt) Ltd

- Own deployment and optimization of production environments on Linux, Docker, and MicroK8s (Kubernetes), backed by CI/CD pipelines.
- Architect scalable RESTful APIs and cut database query response times through targeted performance tuning.
- Design multi-tenant PostgreSQL databases while leading both front-end and back-end delivery teams.
- Ship modern Vue.js + TypeScript interfaces that raised usability and overall UX quality.
- Mentor junior developers through structured code reviews and technical interviews, raising the team's engineering bar.
- Drive cross-functional architecture decisions and platform integrations; troubleshoot complex production-grade LEMP-stack systems.

Software Developer – Full Stack
Feb 2024 – Jan 2025 · 11 mos
Ceylon Linux (Pvt) Ltd

- Built RESTful APIs across Laravel and Go microservices, reducing MySQL query times by 40%.
- Kept CodeIgniter and legacy PHP systems stable and performant through ongoing maintenance.
- Worked across teams to ship user-focused features and seamless third-party integrations.

Intern Backend Developer
Sep 2023 – Feb 2024 · 5 mos
Ceylon Linux (Pvt) Ltd

- Built and optimized high-performance RESTful APIs in PHP/Laravel, improving backend efficiency.
- Partnered with cross-functional teams to streamline deployments and implement safe versioning for critical operations.
- Got hands-on with Docker and Linux server configuration — the starting point of a DevOps-focused career path.

SELECTED PROJECTS

Private Project Management Platform
Internal tool for team workflows, task tracking, and role-based access to coordinate delivery across engineering teams.

Social / LMS Learning Platform
Hybrid social + LMS platform: course delivery, progress tracking, and community features in one product.
